Our batteries are fully compatible with 48 V positive ground telecom installations, which allows for easy replacement of existing telecom tower batteries without major infrastructure changes. In addition, the ...

Compatible with lead-acid and cascaded lithium batteries, integrates with existing DC power systems to optimize and reduce base station construction and maintenance costs. Works in conjunction with ...

It is especially designed for telecom sites with advanced features: long lifespan, wide range of charging voltage, fast charging, intelligent management, and software anti-theft.

Compared to other battery alternatives, this 48V Lithium Iron Phosphate battery is the perfect combination of size, long life, environmental adaptability and capacity.

IMP 48V Battery System supports solar energy storage of both commercial and industrial purposes. The system is built from integration of LiFePO4 Basic Storage Battery in parallel connection with BMS for ...

Whether you're upgrading a legacy station, deploying an off-grid site, or building out a smart telecom infrastructure, 48V lithium battery systems offer tangible value in reliability, scalability, ...

It features a built-in DC/DC module supporting constant voltage and adjustable voltage output. With modular hardware design, it is suitable for 19-inch rack installation scenarios.

This 48V 100Ah heated rack-mount solar battery utilizes LiFePO4 technology, providing a reliable 5.12kWh capacity for efficient solar energy storage. Its heating function solves common problems like ...
