Why is reliable communication important in a smart grid?

Reliable communication is required for information exchange between the different domains to ensure reliable operations of the power grid and its applications. Similar to NIST in the US, in Europe, the Smart Grid Coordination Group defined its Smart Grid Architecture Model [11, 27, 28].

Should telecom operators focus on reducing electricity demand?

Telecom operators could indeed focus on reducing electricity demand, operating cost, and carbon emissions. Currently, grid electricity, and electricity from DG sets are the most common forms of conventional power supply for telecom towers.

How to power remote telecom towers continuously?

To power remote telecom towers continuously, Scamman et al. (2015b) have proposed an off-grid hybrid system with a combination of solar photovoltaic array, wind turbine, electrochemical storage and a fuel cell. It was reported that a 1.6 kW electrolyzer and 1 kW fuel cell is enough to power 1 kW BTS load continuously.

What are the disadvantages of microwave communication?

Another disadvantage is the cost of installation and recurring subscription fees. Microwave communication is a point-to-point, terrestrial wireless communication technology that utilizes frequencies in the microwave frequency spectrum (1 GHz to 90 GHz).
