This community of 46 households act as their own energy supplier and grid operator, relying on a single connection to the public electricity network. The smart grid has been running ...

An almost classic example of a microgrid is the Amsterdam virtual power plant. Here, 50 households produce electricity with solar panels, store it in-house and trade it according to ...

A new report funded by the Dutch government finds that microgrid technologies could make a local "techno-economy" 90 percent self-sufficient, through the decentralised sharing of ...

One of the most impressive features of the project is its smart micro-grid, which has enabled the community to act as their own energy supplier and grid operator thanks to a special experimental ...

Schoonschip aims to generate as much as possible of its energy, and any excess from the households will be efficiently handled by our smart-grid in which electricity is stored in large batteries and heat in ...

In a broad collaboration between businesses, governments, and knowledge institutions, the LIFE project has taken a pioneering step in tackling grid congestion in Amsterdam Southeast.

The Schoonschip community will be using blockchain technology to exchange the clean energy generated on the houseboat roofs and saved in batteries. The water supply will be separated into ...

A study commissioned by the Dutch Ministry of Economic Affairs and the Netherlands Enterprise Agency is monitoring the performance of three microgrid projects in Amsterdam and one ...
