How can technology help teachers achieve a better work-life balance?

Using technology can free up a significant amount of time and help teachers achieve a better work-life balance. By switching from paper to digital data, it becomes easier to gauge students' learning difficulties, modify the instructions, and customize learning for better outcomes.

How can a computer use its stored information more efficiently?

A computer can use its stored information more efficiently than any other device. In our earlier example, we mentioned the ability to store thousands of books. Once those books are stored on a computer, they can be sorted into categories, alphabetized, and searched to find what you're looking for in a few seconds.

Why is a tablet a smart investment?

Funding is often the biggest obstacle for educators when it comes to implementing new technology in the classroom. Hence, it is important to use free resources wherever possible. Speaking of funding, a tablet is also a smart investment. It saves space by fitting thousands of textbooks into a single device.

Why should you use a spreadsheet?

Hollerith's machine was approximately ten times faster than manual tabulations and saved the census office millions of dollars. More recent computers could improve these results even further. In addition to helping you make and save money, a spreadsheet is also an excellent tool for tracking your finances and breakdown your spending habits.
