Building Integrated Vehicle Energy Solutions (BIVES) and Resilient Energy Storage and Backup (RESB) represent the most accessible and immediate opportunities for adopting bidirectional charging ...

Our analysis highlights the feasibility, advantages, and challenges of implementing V2X in urban settings, underscoring its significant role in transitioning to a resilient, low-carbon urban ...

In this article, we explore the rapid growth of the EV market, the current state of the charging landscape, and how Sigenergy is at the forefront of revolutionizing energy storage and distribution with its ...

This study evaluates the long-term environmental effects of a widespread deployment of bidirectional charging in the European energy supply sector using a prospective life cycle assessment (pLCA) ...

The expansion of bidirectional EV charging addresses several ...

The technology enables charging the batteries of electric vehicles and transferring the stored energy back to the stationary storage system in the building or to the grid when needed.

In this paper, our objectives are to examine VGI strategies including bidirectional or vehicle-to-grid (V2G) concepts reflecting realistic operation scenarios, evaluate the performance of ...

The expansion of bidirectional EV charging addresses several critical challenges in energy management. During peak demand periods, such as summer afternoons when air ...
