JNZC supplies durable wind energy fasteners, including tower bolts, nacelle bolts, and blade studs for wind turbines. Certified for extreme conditions (-40°C to 100°C).

These bolts are used to connect the wind turbine's blades to the hub, where the shaft meets the generator. The rotor blades of a wind turbine spin a propeller, which moves the machine forward.

In addition to ISO 4014 and ISO 4017 fasteners, we are also competitive on HV-sets, tower bolts, blade bolts, and additional transportation bolting/fittings. Regardless of your urgency, allow Lightning Bolt ...

Big Bolt Nut manufactures HV bolts & nuts in 10.9 grade using high quality alloy and carbon steel material for wind farms and wind energy sector, our bolts and nuts are used extensively in the on ...

Wind turbines usually need 80 to 160 blade bolts, with T-bolts being the most common type used. This stresses their importance in improving wind turbine blade and hub strength since ...

Elevate your wind turbine fasteners & bolts with our manufactured solutions. Offering support & maintenance in challenging wind power & energy applications.

Battery operated wrenches powered by Lithium-ion batteries can put out 5000 ft-lbs of torque and tighten over 90 bolts with one battery! With some of the latest battery-operated wrenches, ...

Custom large diameter bolts, Grade 8 fasteners & more. With the Wind Energy industry expected to double or triple over the next twenty years, look to Mudge for reliable, effective, corrosion-resistant ...
