How is energy used in Bolivia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How much electricity does Bolivia import?

Bolivia's electricity export and import activities are fairly limited. Imports from Brazil amount to less than 0.01 TWh per year and have so far been devoted to supply the city of Puerto Suarez, in the Department of Santa Cruz. Electric power consumption per capita in 2006 was 588 kWh (a 19% increase since 1996).

What is the electricity system in Bolivia?

Like in other countries, Bolivia's electricity sector consists of a National Interconnected System (SIN) and off-grid systems (known as the Aislado). The national government's priorities for the electricity sector include providing universal access to electricity and producing surplus energy for export.

Will Bolivia increase the share of renewables in energy consumption?

It aims to raise the share of renewable power generation to 75% by 2050 (intermediate target of 65% by 2031). In 2023, renewables covered 29% of the power mix. In its second NDC (2022), Bolivia has pledged to increase the share of renewables (including large hydro) in energy consumption to 19%.

Bolivia Total Energy Consumption data is updated yearly, averaging 0.113 BTU qn (Median) from Dec 1980 to 2023, with 44 observations. The data reached an all-time high of 0.359 BTU qn in 2023 and ...

How much energy does Bolivia consume each year? How much total energy -- combining electricity, transport and heat -- does the country consume each year? This interactive chart shows primary ...

Electric power consumption per capita in 2006 was 588 kWh (a 19% increase since 1996). [8] By sector, residential consumption represents 40% of the total, followed by industrial consumption with 28%.

Bolivia Total Energy Production & Consumption Per capita energy consumption stood at 0.82 toe in 2024 (including 846 kWh of electricity), 26% below the Latin America average (65% below for ...

Investments SDGs only apply to developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities ...

Bolivia: Primary energy consumption: The latest value from 2023 is 0.359 quadrillion Btu, an increase from

# Bolivia electricity consumption

Source: <https://elalmacendelaireacondicinado.es/Thu-09-Jan-2020-14168.html>

0.353 quadrillion Btu in 2022. In comparison, the world average is 3.088 quadrillion Btu, based ...

Electricity consumption in Bolivia is experiencing positive growth. As of 2024, Bolivians consume 998 kWh of electricity per person, an increase from the prior record of 975 kWh per person set just a year ...

It also includes non-energy uses of energy products, such as fossil fuels used to make chemicals. Some of the energy found in primary sources is lost when converting them to useable final products, ...
