One of the measures taken from the previous royal decree is to make it easier for energy storage to be added to the grid, as Spain aims to have 22.5GW of installed energy storage by 2030.

This year has been particularly active: 25 of these projects have seen developments in 2025, representing 1,335.62 MW moving forward with favourable environmental impact statements or ...

With a significant deployment of renewable energy capacity, Spain stands out in this report for two factors that go beyond traditional solar energy and wind sources in the field of storage.

Our hybrid inverters bridge solar input, energy storage, and local grid or generator power in containerized environments. With advanced MPPT tracking and intelligent switching, they ensure ...

Accelerated growth of energy storage facilities in Spain, including large hybrid projects with renewables. National and European industrial innovations support advanced solutions adapted to European ...

In this report, we delve into the developments in the regulatory framework of the Spanish electricity system and explore the potential of Spain's battery energy storage systems (BESS) market.

“Achieving this level of development of renewable energy and storage projects in Catalonia by 2030 seems like a pipe dream,” warns the consulting firm PwC in a report on the ...

Provided analysis and modelling to support storage developers, investors and operators on 30+ projects, including BESS, co-located assets and long-duration storage across markets.
