China accounts for 72 percent of the global market for new wind turbines -- a steady increase from 65 percent in 2023 and 58 percent in 2022, according to a report from the World Wind ...

China's wind and solar power installed capacity totaled 1,840 GW at the end of 2025, according to data released by the National Energy Administration yesterday.

In recent years, China has made many new breakthroughs in the development of wind power technology in the fields of high-power wind turbines, wind turbines for ultra-low wind speed, ...

As of March 2025, China has emerged as the world's offshore wind powerhouse -- growing from under 5 GW in 2018 to 42.7 GW in 2025 (50% of global capacity). Offshore wind could play a role in ...

On 5 August 2020, a new report revealed by the Global Wind Energy Council stated that China is expected to host more than a fifth of the world's offshore wind turbines, equating to 52 GW, claiming ...

China is leading the world in new solar and wind installations and doing so at a record-shattering pace. In May 2025 alone, the country added 93 gigawatts of solar capacity, or nearly 100 ...

China has more wind power than any country in the world and is currently adding twice as much as the rest of the world combined.

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.
