The OSHA 10-Foot Rule mandates that workers, tools, and equipment must stay at least 10 feet away from overhead power lines carrying up to 50 kV (kilovolts) of electricity. For power lines ...

Power lines emit extremely low frequency (ELF) magnetic fields, which cannot be blocked by walls or trees. However, these fields weaken significantly with distance. This calculator provides:

The primary objective is to maintain a safe distance between any structure, person, or piece of equipment and the energized conductors, accounting for factors like line sag under heat or ...

Adding a new building or modifying an existing one? Make sure to respect the clearance required from power lines. Here are the safe distances for each case.

As a general requirement, stay at least 20 feet away from overhead power lines. If you need to work closer than 20 feet, contact us to discuss how to make the area safe for everyone.

Ensuring minimum clearance between power lines and structures will help reduce the risks associated with working in close proximity to electrical infrastructure. Overhead power lines can be dangerous ...

The required distance for building near power lines varies based on technical and legal factors. Get a clear overview of how these rules are set and applied.

If your project will ever require construction or maintenance equipment such as ladders, scaffolding, building tools or materials within 10 feet of overhead lines
