-----

The EU's battery energy storage fleet has grown for the 12th consecutive year, marking yet another record year for new installations. According to a new report from SolarPower Europe ...

By recognising storage systems under EU funding mechanisms and grid planning processes, the EU can unlock their full potential, not only in stabilising energy supply and maximising...

The EU installed a record 27.1 GWh of new battery storage capacity in 2025, driven by utility-scale projects that accounted for over half of new additions as the bloc races to build the ...

27.1 GWh of new battery capacity installed in 2025, marking the EU's 12th consecutive record year for battery storage deployment. 55% of all new capacity came from utility-scale systems, ...

The Kvested project combines an existing utility-scale solar park with large-scale battery storage to create a fully integrated hybrid asset. The battery system has been operational since ...

The EU installed 27.1 GWh of new battery storage capacity in 2025, a new record year powered by strong utility-scale deployment, according to SolarPower Europe.

This acceleration follows a brief period of stagnation and arrives as solar power accounts for nearly half of the EU's total electricity production. Because grid infrastructure often struggles to ...

For the twelfth consecutive year, the EU achieved a record level of battery storage installations, driven primarily by utility-scale projects. Residential installations declined. The rapid ...
