Enhanced geothermal systems could provide constant, low-cost, clean electricity while reducing land use and infrastructure needs in a global renewable energy transition.

In this article we look at the data on renewable energy technologies across the world; what share of energy they account for today, and how quickly this is changing.

The forecast for growth in global renewable power capacity is revised down slightly, mainly due to policy changes in the United States and China. The renewable energy growth forecast for the 2025-2030 ...

Renewable Energy GenerationRenewables in The ElectricitymixHydropowerWind EnergySolar EnergyBiofuelsGeothermalHow much of our electricity comes from renewables?In the sections above we looked at the role of renewables in the total energymix. This includes not only electricity but also transport and heating. Electricity forms only one component of energy consumption. Since transport and heating tend to be harder to decarbonize - they are more reliant on oil and gas - r...See more on ourworldindata
