The Ministry of Tourism and Antiquities, represented by the Supreme Council for Antiquities (SCA), the Industrial Modernization Centre, and the United Nations Development ...

Using only simple tools, they were able to use obsidian - a type of volcanic glass composed mostly of silicon, with high levels of naturally occurring boron - to construct simple solar ...

A simulation model of the solar energy impinging on stone blocks is made to ascertain the impact of solar radiation on the walls of the Pyramids of Giza, Egypt.

Recent analysis of a stone found in the Libyan Desert Glass area of southwest Egypt, has sparked debate and a rethink of the current consensus on the formation of the solar system.

Using only simple tools, they were able to use obsidian -- a type of volcanic glass composed mostly of silicon -- with high levels of naturally occurring boron to construct simple solar cells using hand ...

Egyptians used reflective surfaces, such as polished stones and metals, to manipulate light and heat, aiding in illumination and possibly in solar-focused heating methods. These practices ...

Egyptian mica natural stone has exceptional thermal and electrical insulating properties, making it a preferred choice in the manufacturing of electrical equipment and insulation materials.

Furthermore, some researchers have even proposed that the ancient Egyptians developed highly-polished bronze mirrors that may have been strategically placed at the monuments" ...
