What is El Salvador's energy supply?

El Salvador's energy supply primarily comes from fossil fuels, such as oil, gasoline, diesel, liquid petroleum gas (LPG), kerosene, and bunker fuel. Natural gas does not play a role in El Salvador's energy supply.

Where are solar panels installed in El Salvador?

Most of the country's installed solar panels are in government buildings, schools, manufacturing plants, and universities. The capacity of the largest PV system is 99 MW, with a total electricity generation of 489.6 MW. There are four hydroelectric dams located in El Salvador, all along the aforementioned Rio Lempa.

Does El Salvador have a capacity to conduct renewable projects?

El Salvador has the national, political will to conduct renewable projects, as evidenced by the numerous incentives provided, the dire climate risks in the country, and their regional partnerships. While the institutional capacity is still catching up, to say they don't have any capacity would be false.

How much electricity does El Salvador produce?

El Salvador has three biomass plants which produce about 109.5 MW of electricity. Central El Salvador receives high levels of solar radiation that are conducive to solar generation. Most of the country's installed solar panels are in government buildings, schools, manufacturing plants, and universities.
