PV plant control and management for large-scale power plants. The INGECON SUN Plant Controller is a brand new development to help the grid operator to predict the PV plant performance.

Within a PV system, the system controller mainly refers to the device used to control and manage battery charging and discharging to ensure the health of the battery and prolong its life.

The Computer Controlled Photovoltaic Solar Energy Unit, "EESFC", includes equipment that uses the photo-conversion law, which directly converts solar radiation into electricity.

Learn how power plant controllers (PPC) manage and optimize the operation of solar farms utilizing advanced control software.

Solar power electronics innovations are driven by the need for lowering cost and improving efficiency and service life. In addition, these devices need capabilities to improve grid resilience, reliability, and ...

Solar charge controllers, solar panel controllers, or solar controllers, are an invaluable piece of equipment that regulates the flow of power from solar panels to the battery in a photovoltaic ...

Photovoltaic controllers manage and regulate the electricity produced by solar panels in a solar power system. Its main functions include supervising the charging and discharging of the battery to ensure ...

ePowerControl PPC is suited for the control and monitoring of utility-scale solar plant applications (grid-tied or off-grid), with advanced capabilities in the field of PV monitoring system. Does the ...
