-----

Diversification efforts were sparked in the wake of Russia's aggressive war in Ukraine in 2022. At the time, Moldova's energy self-sufficiency was among the lowest in the world, with only ...

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing circuit, which ...

In MIT course 15.366 (Climate and Energy Ventures) student teams select a technology and determine the best path for its commercialization in the energy sector.

Now, except for Transnistria, there is no energy shortage in any country, so a potential energy crisis - even if it is expected to lead to higher bills - does not mean an energy shortage. In ...

The European Commission and Moldova signed a two-year strategy for energy independence and resilience, allocating 250 million euros (\$258 million) to Chisinau in 2025, the ...

The cessation of Russian natural gas supplies to Transnistria has precipitated a severe energy crisis, leading to the suspension of nearly all industrial operations and leaving hundreds of ...

MIT News explores the environmental and sustainability implications of generative AI technologies and applications.

For Transnistria, a region with limited international recognition and aging energy infrastructure, achieving independent power through renewable energy storage could be transformative.
