This report is in the framework of an administrative agreement with the Directorate-General for Energy with the objective of developing the European energy storage inventory [1], a platform designed to ...

As Europe continues its transition to a more sustainable and resilient energy system, energy storage remains a critical enabler of renewable energy expansion. The report underscores ...

The large-scale battery segment is growing rapidly, and for the first time, is set to represent most of battery installations on the continent this year. Historically, home batteries have ...

This section outlines key EU projects, initiatives, and market trends in energy storage, highlighting efforts to integrate renewables, enhance grid stability, and support the clean energy transition.

Since 2020, Europe's energy storage sector has grown rapidly, with different technologies progressing at varying speeds. Pumped hydro remains the largest contributor, ...

This innovative tool systematically catalogizes all energy storage projects within Europe, from the first planning phase to operational operation.

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity ...

A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, LCP Delta has said.
