Airtech ETFE & FEP films are used for a wide range of applications such as: Solar Cells Photovoltaic front sheet and back sheet material. Protective film for solar panels and collectors, ETFE Film has ...

One solution investigated in this work involves the implementation of a passive self-cleaning superhydrophobic top cover. To this end, superhydrophobicity was induced by hot ...

Fraunhofer FEP has designed PV modules that can be integrated in facades, offering seamless aesthetics with a massive solar efficiency boost.

This work explores the self-cleaning approach by optimizing microtextured fluorinated ethylene propylene (FEP) covers for PV modules that exhibit superhydrophobicity and improve light ...

Engineers need solutions that balance low glare, high efficiency, and long-term durability. Let us find out together how innovative matte FEP solar front sheets can be the next important thing in solar energy ...

This program demonstrates how to evaluate the lifetime of the front sheet under flexible PV mission profile and provide insight on the failure modes and design criteria of these components.

As part of the Design-PV project, Fraunhofer FEP has made significant progress in developing aesthetically appealing solutions for building-integrated photovoltaics.

Germany's Fraunhofer FEP has unveiled a dirt-repellent coating for solar panels. The material is reportedly able to acquire superhydrophilic properties at night and wash away the dirt ...
