In a world where climate change is accelerating, wind and solar power seem more important than ever. Mapping the World investigates how these renewable energy sources, which have been used for thousands of years, are being reinvented in the 21st century.

Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy Sources Act, and ...

From 2022 to 2023, Germany saw installations of new wind and solar power nearly double, a shift driven in part by sweeping changes to simplify permitting for clean energy projects.

In Bavaria, the small town of Wunsiedel is creating a clean energy blueprint for the world to follow. Its distributed energy system is powered solely by renewables, including wind, solar, ...

German physicist Jurgen Kleinwacher explains his challenge to develop technological methods to harness the sun's abundant energy, to benefit of all humankind. "The Solar Power Village" draws its ...

The rapidly falling cost of solar power and battery storage is a major climate success story of recent years, helping renewables overtake coal for the first time in global electricity...

Germany wants green power from solar, wind, biomass and hydroelectric generation to account for 80 per cent of its energy mix by 2030. Is this a realistic target? Germany wants out of...

Meet intriguing people, travel to distant lands, get a look behind the complexities of daily life and build a deeper understanding of current affairs and global events. Subscribe and explore the...
