---

Greek utility PPC Group has officially broken ground on a hybrid solar and battery energy storage system (BESS) on the island of Astypalea, aiming to cover more than 80% of local electricity demand ...

The largest hybrid project in Europe and the first of its size and characteristics in Greece, the Hydro Pumped Storage in Amari, Crete, is a model green investment of strategic importance that creates ...

Greek renewables developer Eunice Energy Group stepped in, funding the project's 160 kW of solar capacity and 800 kW of wind power equipment, and now owns the system. The EU ...

The much-awaited ministerial decree for zero-subsidy standalone battery systems has been published in Greece. So far, Greece has provided support to 900 MW of standalone storage ...

While batteries are gaining traction, Greece is also investing in large-scale pumped hydro energy storage. By repurposing decommissioned mining sites, the country is turning industrial scars ...

These systems could also lower prices on the day-ahead market, where Greece has remained among the most expensive EU countries since 2018 and well above pre-crisis levels. As for ...

Estimates vary, but a total storage capacity of at least 4 GW and 15-20 GWh is considered appropriate to support system needs over the next decade. Currently there is a growing interest for investments ...

Investors in hybrid projects -- pairing renewables with batteries -- complain that rules are still evolving, creating uncertainty about revenues. Market operators argue that unless Greece ...
