Japanese optoelectronic and semiconductor manufacturer Kyosemi Corporation has developed a solar cell called the Sphelar that could turn any pane of clear glass into a solar energy ...

A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere!

A spherical solar cell is a small, circular photovoltaic cell that uses sunlight from all directions (and scattering off the clouds) to generate electricity, a full 360 degrees around the device, ...

Until recently, solar power was synonymous with flat, rigid panels that had to face the sun to generate electricity efficiently. Japan's Kyosemi Corporation has now reimaged this with the...

This generator will combine spherical geometry principles with a dual axis sun tracking system. The glass sphere is used to concentrate diffused sunlight into a small surface of tiny solar panels.

Spherical Sun Power Generator A spherical solar power generator, called spherical lens, was invented. It will produce twice the efficiency of a conventional solar panel in a much smaller ...

King Abdullah University of Science and Technology has produced a large-scale spherical silicon solar cell under novel, corrugation methods that bend rigid silicon to be flexible.

German-born, Barcelona-based architect Andr#233; Broessel has developed a futuristic spherical glass solar energy generator that"s both interesting and functional.
