A new NREL study indicates that this potential power source has the ability to support an even larger share of U.S. electricity generation than previously thought.

Over the last decade, industry prices have dropped 42% in Florida, enabling over 275,000 households to adopt solar energy, providing resilience against natural disasters. Virginia has the fastest-growing ...

While the Northeast power markets of NYISO and ISO-NE have discoverable revenue streams to support hybrid solar projects, the markets are sufficiently competitive that strong merchant returns ...

Many Northeastern states have set targets for solar energy generation, which, coupled with financial incentives, are largely responsible for driving more solar power capacity in the ...

Researchers have developed floating solar panels that could significantly enhance solar energy production in the eastern United States, particularly in the Northeast.

Energy in the North East is changing shape as state leaders respond to consumers' concerns and move toward cheaper, more plentiful and renewable energy sources. Currently, the region is one of the ...

The following table ranks the best and worst states for solar energy production (shown in thousand megawatt-hours) in October and November, number 1 represents the best state for solar ...

This discussion explores the vast potential of solar power across the nation. It looks at how climate, geography, and energy policies affect its viability, as highlighted by solar market insights.
