This paper optimizes the design of a novel large-span cable-supported steel-concrete composite floor system in a simply supported single-span, single-strut configuration, aiming for cost-effective ...

A case study was conducted on flexible photovoltaic support structures with a single span of 33 m and a larger span of 66 m to validate the proposed method, confirming its feasibility ...

Flexible photovoltaic (PV) support structure offers benefits such as low construction costs, large span length, high clearance, and high adaptability to complex terrains.

Flexible mounting solution is an architectural form that fix solar modules between the buildings has significant advantages when applied in large span areas, such as rivers, sewage treatment plants, ...

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support...

Abstract The flexible photovoltaic support system is one of the systems that have been proposed to support photovoltaic modules with wide application potential in recent years. It has the advantages of ...

Since 2000, flexible support photovoltaic module structure systems have been widely used because of their advantages such as short construction period, large span, good economic ...

Taking a flexible PV bracket with a span of 30 m and a cable axial force of 75 kN as the research object, we investigate the variation patterns of the support cables and wind-resistant cables ...
