As the industry's first public service hub, this station features a parcel locker alongside a "Lithium + Sodium" hybrid grid-forming ESS. The locker enables AI-driven drone dispatch, smart...

Overview Specifications Operational history International exhibition Operators The Silent Hunter is an anti-drone laser weapon developed in China. It is an improved version of the 30-kilowatt Low-Altitude Laser Defending System (LASS) and is available in both fixed and mobile versions.

Chinese firm Sinexcel has launched a logistics station equipped with a hybrid lithium-sodium system, marking a global first in integrating grid-connected energy storage with urban drone logistics.

EA can effectively bridge this gap, enhancing connectivity between these cities. Through the low-altitude transportation system, the efficiency of inter-city transportation a

This milestone validates the feasibility of grid-forming energy storage in low-altitude logistics, setting a new benchmark for integrating next-generation power systems with emerging low ...

The system transmit power nearly million kilowatts, low effective protection area of 12 square kilometers, in 5 seconds precise intercept radius of 2 km and 360 degree spatial fixed wing and other aircraft, ...

Discover how SINEXCEL introduces the world's first grid-forming energy storage system for low-altitude logistics, paving the future of delivery.

New fire-resistant electrolytes make these systems safer than your grandma's cookie jar. Recent tests show they can survive temperatures that'd melt regular batteries - perfect for those ...
