What is Bess technology?

BESS technology, which enables the storage of energy both from renewable and non-renewable sources, was actually pioneered in the Philippines as far back as 2016 by what is now SMC's Masinloc power facility. That pioneering BESS project introduced the use of advanced lithium-ion battery technologies in the Philippines and Southeast Asia.

How many Bess facilities are there in the Philippines?

We are operating BESS facilities at 32 locations in the Philippines, across the regions of Luzon, Visayas, and Mindanao. Overall, we are putting up approximately 1,000 MW of BESS facilities, which will help ensure the reliability of the grid, especially in areas that are in most need of power quality solutions.

Why should you choose a Bess facility?

The smart and efficient services of BESS facilities allow for a more robust integration of renewable energy sources such as solar and wind energy to the grid. Our battery energy storage business is one of the ways we show our commitment to sustainable energy, as our BESS facilities also operate with zero emissions.

What is the Bess network and how can it help?

Equally significant, according to Ang, is how the BESS network can enable the integration of capacity from small-to-medium scale renewable energy sources into the grid, and help encourage more investments in renewables in the future.

They require a continuous and reliable power supply to ensure uninterrupted communication services. In areas where power outages are common, base stations may be equipped with backup power ...

We started our venture into battery energy storage technology in 2018 when we acquired the 10 MW Masinloc Battery Energy Storage System (BESS) of the Masinloc Power Plant from AES Philippines.

The country hosts the first and largest BESS with #1000 MW power facility which is operated by San Miguel Corporation's Global Power Holdings (#SMGP). The facility is located in the province...

MANILA - President Ferdinand R. Marcos Jr. on Friday said the Battery Energy Storage System (BESS) would become a crucial part of the government formula toward a more energy ...
