With the high penetration of renewable energy, the active distribution network (ADN) and multi-microgrids (MMGs), as emerging multi-layered energy management systems, face challenges ...

Lead by Los Alamos, the resilient operation of networked microgrids allows users to formally define their resilience goals and predicted threats, generate candidate microgrid designs ...

So, this paper presents the proposition of a hierarchical model for planning the daily operation of active distribution grids with microgrids. In this case, the entire grid operation is...

With the rapid development of renewable energy generation, the increasing microgrids may be integrated to ADN [1, 2]. It is necessary to coordinate power schedule between ADN and ...

CCP-AP and PBAP highlights the superior performance of the proposed method. Furthermore, this thesis investigates the active management of ADNs within a transactive electricity market framework, ...

This article proposes a multistage active distribution network planning model that optimizes the microgrid structure for economical and technical feeding of critical loads.

A multi-objective optimization method for energy storage optimization in active distribution networks with multiple microgrid is proposed to address the low utilization of renewable energy in active distribution ...

Utilizing a gated recurrent unit (GRU) in the deep learning network, we adopt a data-driven approach to encapsulate MG demand response characteristics, enabling a direct mapping ...
