What is point of common coupling direct Power Control (PCC-DPC)?

This work aims to present a new control approach known as Point of Common Coupling Direct Power Control (PCC-DPC) for grid-connected renewable energy inverters in on-grid microgrid mode (MG). The main aim of PCC-DPC is to simplify the control system by varying the voltage at the point where the microgrid connects to the main power grid.

Can grid-tied AC mg's photovoltaic voltage source inverter control direct power?

Abstract: In this paper, a direct power control (DPC) approach is proposed for grid-tied AC MG's photovoltaic (PV) voltage source inverter (VSI) to regulate directly active and reactive powers by modulating microgrid's (MG) point of common coupling (PCC) voltage.

Can a grid-tied photovoltaic (PV) voltage source inverter control power flow?

A direct power control (DPC) approach is proposed in this study for a grid-tied photovoltaic (PV) voltage source inverter (VSI) to regulate active and reactive power flow directly in between utility grid and microgrid (MG) by controlling point of common coupling (PCC) voltage.

Why do microgrids need robust control mechanisms?

Robust control mechanisms are needed in microgrids to ensure voltage source inverters (VSIs) effectively integrate renewable energy sources such as solar photovoltaic (PV) systems into the power network. Current control approaches often have limitations regarding velocity, stability, and robustness.

A Compensation Method of Point of Common Coupling Voltage for Microgrid Based on Voltage Estimation

Jun Fu¹, Xiaochen Wang¹, Zhaohui Shi¹, Fan Zhang², Xinning Li², and ...

A direct power control (DPC) approach is proposed in this study for a grid-tied photovoltaic (PV) voltage source inverter (VSI) to regulate active and reactive power P_{ow} directly in between ...

In this paper, a direct power control (DPC) approach is proposed for grid-tied AC MG's photovoltaic (PV) voltage source inverter (VSI) to regulate directly active and reactive powers by ...

Then a voltage estimator is designed to estimate the voltage compensation value so as to reduce the effect of virtual impedance and line impedance on the voltage of common points. ...

Unlike other energy management models, in hybrid model, multi-microgrids are connected to the grid through

Microgrid common point coupling point voltage
