---

China dominates the solar energy sector, producing 77.8% of the world's solar panels and possessing 393GW of solar capacity in 2022. According to the International Energy Agency (IEA), ...

It is provided by the World Bank Group as a free service to governments, developers and the general public, and allows users to quickly obtain data and carry out a simple electricity output calculation for ...

The latest available figures show that the world used 856 TWh (terawatt hours) of solar energy in 2020. The solar energy production figures have also risen over the last decade, in line with ...

Electricity generation from solar, measured in terawatt-hours.

Find up-to-date statistics and facts on the global solar photovoltaic industry.

Solar power plants use one of two technologies: Photovoltaic (PV) systems use solar panels, either on rooftops or in ground-mounted solar farms, converting sunlight directly into electric power.

Estimates the energy production and cost of energy of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, installers and manufacturers to ...

Unlike traditional power plants that rely on fossil fuels, photovoltaic panels harness the sun's energy, reducing greenhouse gas emissions and dependence on non-renewable resources.
