“Specialized chamber for lithium battery packs, conducting temperature/humidity cycling tests to assess reliability, performance, safety, and lifespan under simulated environmental conditions.”

This versatile range caters specifically to EV battery pack testing needs, ensuring comprehensive and scalable solutions for validating and testing battery packs across various power capacities.

The ESS Battery Cell Performance Testing Cabinet is a high-precision system designed to evaluate the electrical and thermal performance of energy storage system (ESS) battery cells.

Our test solutions are designed to test battery cells, modules, packs and battery management systems for e-mobility, mobile, industrial, and stationary use.

Optimize your battery development with our comprehensive test equipment, offering precise measurements for various chemistries and applications in research, quality control, and production.

Rows of Hongda cabinets operate seamlessly, monitoring real-time parameters across hundreds of testing channels simultaneously. The partnership validates Hongda's design philosophy, ...

It is designed according to the requirements of relevant national testing and maintenance regulations, and is a special testing instrument for fixed battery performance testing.

Sanwood provides full-spectrum environmental test chambers for New Energy Batteries (EV & ESS). Validate safety, performance & lifespan per UN38.3, IEC 62660 & GB/T with precise simulation.
