Energy storage could contribute significantly in reducing energy used for heating and cooling of buildings and hence reduce CO2 emissions, specifically in New Zealand due to its moderate weather condition.

Soft lithium-ion technology will provide 100 MW power and 200 MWh storage capacity to support grid stability as intermittent wind and solar power increases in New Zealand

Best practice guidance to help homeowners choose, install, and maximise solar PV and battery storage for savings, reliability, and sustainability.

With strategic investments and cross-sector collaboration, electrochemical storage will anchor New Zealand's clean energy future, ensuring its landscapes remain pristine while powering...

Zealand's energy security over the short, medium, and long term. This white paper presents the key findings of that analysis, including considering a long list of solutions for flex.

The Electricity Authority Te Mana Hiko has published a draft two-year roadmap that sets out our work to support investment in battery energy storage systems (BESS).

As part of phase 1 of the feasibility study of the Lake Onslow project the government has evaluated a range of alternatives to address the energy storage challenge, focusing on long-duration and large ...

To unlock the full potential of BESS, New Zealand should explore innovative commercial models that deliver value to multiple stakeholders. This report models real-world scenarios to show where BESS ...
