How long do solar panels last in Nicosia?

With over 2,500 home installations, we're proud to be one of the top experts in photovoltaics in Nicosia and we guarantee maximum return on investment: up to 25 years on solar panels and 12 years on the inverters.

What is a double glass solar module?

In the ever-evolving world of photovoltaic technology, double glass solar modules are emerging as a game-changer. By encapsulating solar cells between two layers of glass, these modules offer unparalleled durability and efficiency. But what exactly sets them apart? What are double glass solar modules?

Why are double glass solar panels bifacial?

Thermal stability: The identical thermal expansion coefficients of the glass layers minimize stress on solar cells during temperature fluctuations. **Dual-sided energy Capture:** Many double glass modules are bifacial, allowing them to harness sunlight from both sides.

What is a double glass module?

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers. This ensures greater durability and longevity.

Unlike traditional solar panels that only absorb light from one side, bifacial PERC panels can absorb light from both sides, doubling the amount of sunlight captured and increasing power output. [pdf]

Invest in a photovoltaic system in Nicosia and achieve amortisation of the initial cost through savings on your electricity bills within a few years. A great investment for everyone.
