Today, the U.S. has leapfrogged competitors and ranks 3rd in manufacture of solar panels, passing large solar manufacturing countries like Malaysia, Thailand, Vietnam, and Turkey. ...

Right now, U.S. manufacturers do not produce enough solar panels to meet the nation's demand, but industry investments and federal tax incentives have been making progress, though ...

A decade ago, someone knocking on your door to sell you solar panels would have been selling you solar panels. Now, they are probably selling you a financial product--likely a lease or a...

In this post, we dive into how solar panels are built, the challenges manufacturers face, and promising opportunities, especially innovations that aim to make panels more efficient, ...

Plug-in solar has remained in the shadows because of a lack of safety standards and often costly requirements imposed by utilities, but that's changing.

Yet wide gaps persist across key segments of the domestic PV supply chain, as do concerns over higher costs for US-made solar equipment and the long-term viability of factories ...

Solar panels aren't really made in the United States anymore, even though the market for them is larger than ever. Starting in the 1980s, leadership in the industry passed to Japan, then to...

More than 85% percent of a solar photovoltaic (PV) module is made of materials we already know how to recycle, like aluminum and glass. However, solar panel recycling--and ...
