-----

All work on the inverter must be carried out by qualified electricians. The device may only be operated with PV panels. The PV panels and inverter must be connected to the ground. Do not touch the ...

Before opening the inverter, you should wait five minutes to ensure that the capacitor has been fully discharged.

After install the LUX GPRS/4G. open the inverter or converter. When the first time to install the GPRS or 4G, the LED of datalogger will light as follow:

Never attempt to start the inverter if battery power is not connected. Damage may occur if any attempt is made to start the inverter under solar, generator or utility power, without the presence of a battery ...

Turn of your PV Array DC isolator located adjacent to your inverter, if the inverter is more than 3 metres away from the main switch board, another isolator may be installed adjacent to the inverter.

Safely turn on, shut down, or restart your solar inverter with this step-by-step guide. Ensure proper operation and troubleshoot issues.

A restart of the inverter can be performed by switching off the fuse of the inverter (or the circuit breaker of the inverter) overnight and switching it on again the next morning.

When sunlight is insufficient, the PV inverter may continuously start up and shut down automatically due to insufficient power generation from the PV panels, which would not lead to inverter damage.
