The US set unprecedented renewable energy records in 2024-2025, driven by a solar power surge. Explore the impact on Yucca Valley: jobs, land use & local control.

Creating a record account for solar energy involves several essential steps that ensure proper tracking and management of solar energy production and consumption.

These power production records (all of which are current through April 17) are the direct result of a rapid capacity buildout. According to the Energy Information Administration (EIA), the U.S. ...

The U.S. generated a record 756,621 gigawatt-hours (GWh) of electricity from solar and wind in 2024 -- enough to power the equivalent of more than 70 million average American homes.

Solar hit 10.7% of US power in April, a new record, as wind + solar beat coal and nuclear, and renewables came within 2% of natural gas.

If those plans are realized, solar would account for more than half of the 64 GW that developers plan to bring online this year. Battery storage, wind, and natural gas power plants ...
