-----

**Purpose** Supporting Pierce County's clean energy & climate goals of 45% GHG reduction by 2030  
Renewable electricity is a key GHG reduction strategy. Success requires streamlining solar ...

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal.

In order to systematically assess the economic viability of photovoltaic energy storage integration projects after considering energy storage subsidies, this paper reviews relevant policies in ...

**Storage Mythbusting** Battery energy storage systems (BESS) store energy and distribute the energy to the electric grid, homes, or businesses. When paired with solar, the duo provides the ...

As the United States grapples with shifting political winds, developers in the distributed solar and storage market are facing a potential policy storm.

Storage installations will grow just under 30% in 2024, but between 2025 and 2028 an annual average growth rate of 10% is expected as early-stage development constraints continue.

When some of the electricity produced by the sun is put into storage, that electricity can be used whenever grid operators need it, including after the sun has set. In this way, storage acts as an ...

A policy primer exploring how energy storage technologies work, the benefits that storage can deliver to the electric grid, the current legal and regulatory barriers to adoption, and policy ...
