-----

What I wanted to achieve was to plug my space heaters straight into the solar panels, bypassing inverters, charge controllers and batteries. Plus save wear on my heat pumps. In ...

We accomplished this feat with a four-fold secret of low-cost construction: We glazed our 8-foot-by-30-foot solar collector with inexpensive plastic film instead of glass or plexiglass. We...

In this post, I'm about to show you (step by step) how to build solar heating system for home, using only scrap parts worth less than a hundred bucks. Are you looking to build and install ...

When the water in the storage tank has reached the desired temperature, the photovoltaic immersion heater is no longer allowed to heat and can therefore no longer use solar power.

Build Your Own Flat Panel Solar Thermal Collector: I've seen a few different designs for solar water heaters (on this site and others) and I wanted to share my own.

Now, you can extend the benefits of your solar panel investment to enjoy free hot water by seamlessly integrating solar PV with immersion heaters.

This new breed of solar panel is incorporated directly into the building envelope. The sleek panels become an exciting new design element, proudly displayed for all to see.

Through experiments, the effects of photovoltaic voltage, photovoltaic current, and coating area on the heating performance of graphene-coated plates were analyzed, and the relationship ...
