The Solar Energy Technologies Office (SETO) is researching the opportunities and trade-offs of agrivoltaics. This guide helps answer some questions that farmers may have about going solar and ...

Agrivoltaic solar arrays can shade crops from sun while moisture from vegetation cools the panels to increase their productivity, researchers and farmers have found.

Some farmers and researchers say that solar panels are good for livestock and crops. Plus, solar companies benefit from relatively low-cost grazing and land maintenance to prevent ...

By producing their own clean electricity, farmers can protect their livelihoods from an increasingly strained grid. Many farmers across America are choosing solar for its reliability and ...

Agrivoltaics is the combination of agricultural production (which converts sunlight to food) with solar photovoltaic technology (which converts sunlight directly into electricity). The practice...

Agrivoltaics is the practice of purposefully shading agricultural crop lands with solar panels in order to enjoy the dual benefits of solar electricity and increased food production.

New research including Michigan State University researchers reveals how solar panels are helping farmers reduce costs, conserve water and stabilize their operations -- and, in some ...

Solar panels on your farm can lower operational costs. Learn how to secure federal funding for solar energy on your farm or ranch.
