Thus, to overcome these problems, photovoltaic solar cells and cover glass are coated with anti-reflective and self-cleaning coatings. As observed in this study, SiO₂, MgF₂, TiO₂, Si₃N₄ ...

We're producing the steel structures designed to support solar panels used in all types of applications. These solar support structures are an optimal solution for parking garages, solar ...

We present models to calculate gains and perform measurements on bifacial modules with different backsheets and covers. Cover coupling gains for bifacial cells are higher compared to monofacial ...

Here, we review the state-of-the-art of cover glasses for PV modules and present our recent results for improvement of the glass.

PV modules experience reflection losses of ~4% at the front glass surface. This loss can be mitigated by the use of anti-reflection coatings, which now cover over 90% of commercial modules.

Explore the type of beams used for solar energy, which steel beams for solar piles rise to the top, and how to find the best partner.

The cover glass sheet at the front of PV modules provides mechanical and chemical protection of the light absorber in the module, as well as high optical transmission.

The pretension and diameter of the cables are the most important factors of the ultimate bearing capacity of the new cable-supported PV system, while the tilt angle and row spacing have little effect on the ...
