This paper presents a holistic datadriven power optimization approach based on deep reinforcement learning (DRL) for microgrid control considering the multiple needs of decarbonization, ...

Mathematical modeling is vigorously explained with a simulation case study. Challenges associated with microgrid implementation are thoroughly analyzed. Future research areas worth ...

When the microgrid is integrated with distributed solar generation, less power from the grid is needed. This case study integrates all four-market accesses together for microgrid analysis.

Hai Long offshore wind project in Taiwan, jointly developed by Mitsui & Co, Northland Power, and Gentari, has produced first power, marking successful energization of the project and ...

He is currently an Associated Professor with the School of Electric and Automation Engineering, Nanjing Normal University. His research interests include dynamical analyze and control of MR suspension, ...

Can Repurposed Jet Engines Solve AI Data Center Power Problems? ProEnergy is converting jet aircraft engines into gas-powered turbines to meet AI data centers" power demands.

A public charity, IEEE is the world"s largest technical professional organization dedicated to advancing technology for the benefit of humanity. &#169; Copyright 2025 IEEE - All rights reserved, including rights ...
