---

To enhance the capability of PV consumption and mitigate the voltage overrun issue stemming from the substantial PV access proportion, this paper presents a multi-objective energy ...

With the proposal of the dual-carbon target, renewable energy generation cannot meet the requirements of flexible grid dispatching as traditional power generation energy. Therefore, the proposal of storage ...

Over the past few years, an abundance of research has focused on the configuration to optimize the energy storage capacity of PV plants. Bullichthe-Massagu&#233; et al. (2020) and Zhang et ...

In response to the current issues of insufficient security assessment and the difficulty of balancing security and economy, a method for optimizing the configuration of PV-storage systems ...

In this paper, a method for rationally allocating energy storage capacity in a high-permeability distribution network is proposed.

In order to solve them, this paper proposes an optimization method of energy storage configuration for a high-proportion photovoltaic distribution network considering source-load ...

In order to ensure the reliability of the power supply of the microgrid system and maximize the utilization and economic of the photovoltaic, it is necessary to appropriately configure energy ...

To sum up, this paper considers the optimal configuration of photovoltaic and energy storage capacity with large power users who possess photovoltaic power station through the bi-level ...
