Despite achieving energy densities up to 300 Wh/kg, cycle lives exceeding 2000 cycles, and fast-charging capabilities, lithium-ion batteries face significant challenges, including safety risks, ...

Battery storage can also be deployed faster than new gas or nuclear plants. Join hundreds of senior executives across energy, industry and finance at Reuters Events Global Energy Forum 2026.

What will the year ahead bring for energy storage in the US and China? Will growth continue to accelerate in the Middle East and Europe, where government-led tenders support new ...

Explore how energy storage growth is driving demand for battery materials, copper, aluminium, and vanadium in the clean energy transition.

The rise of intermittent renewable energy, the growing demand for electrification in transport and industry, and the surge in hyperscalers and artificial intelligence are pushing the ...

This renders battery storage paired with solar PV one of the most competitive new sources of electricity, including compared with coal and natural gas. The cost cuts also make stand-alone battery storage ...

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.

Battery energy storage is reshaping how industries manage power, offering flexibility and reliability in an era of renewable energy transition. From grid stabilization to residential backup systems, this ...
