Where are Russia's wind turbine blades made?

According to a Reuters report from 2024, Rosatom, Russia's state nuclear corporation, established a wind turbine blade manufacturing facility in Ulyanovsk at a site previously used by Vestas. The facility has an annual production capacity of 450 blades and is expected to support both domestic and international wind energy projects.

Where does Russia's wind power come from?

Most of its current limited wind production is located in agricultural areas with low population densities, where connection to the main energy grid is difficult. By 2018, Russia had a total installed wind capacity of 106 MW, a nearly ten-fold increase over 2016 but still a tiny share of the country's potential.

How many wind turbines are being built in Russia?

57 wind turbines are being built 80 kilometres northeast of Murmansk, at the Kolskaya Wind Farm. The farm is expected to be operational in 2021. According to a Reuters report from 2024, Rosatom, Russia's state nuclear corporation, established a wind turbine blade manufacturing facility in Ulyanovsk at a site previously used by Vestas.

Does Russia have wind power?

Wind power in Russia has a long history of small-scale use, but the country has not yet developed large-scale commercial wind energy production. Most of its current limited wind production is located in agricultural areas with low population densities, where connection to the main energy grid is difficult.

It contains data about wind farms, turbines, manufacturers, developers, operators, owners and also pictures and cartographical data.

The wind turbine components market in Russia focuses on manufacturing and supplying components for wind energy generation systems, including rotor blades, nacelles, towers, and drivetrains.

Looking for durable outdoor power supplies in Russia? Whether you're camping in Siberia or managing remote construction sites, this guide cuts through the noise.

In 2023, the Russian government implemented a new regulation mandating that all new wind energy projects must meet specific environmental standards and utilize domestically produced components.
