Mexico is playing catch-up, with the world having installed around tens of megawatts of non-pumped-hydro energy storage sites by 2020, according to the United States Department of Energy.

State-owned utility CFE is constructing a 190MW battery storage unit co-located with a 1GW solar PV project, which is due for completion in 2028 (Energy Storage News, 2023).

But this vision remains aspirational in Mexico, where only two photovoltaic projects currently include storage systems. While the government has ambitious plans to boost the sector, ...

This article addresses Mexico's strides in energy storage amid a lack of clear legislation. With a focus on renewable sources, it highlights the nation's 31.2 per cent installed capacity for ...

According to the regulations promulgated in March 2025, all new solar and wind power projects must be equipped with battery systems equivalent to 30% of their installed capacity, with a ...

Mexico can unlock the full potential of energy storage solutions by fostering greater integration of renewable energy, supporting grid stability, and improving regulations related to battery storage.

Increasing focus on grid stability and renewable energy integration is accelerating demand for advanced energy storage solutions in Mexico. Lithium-ion batteries remain the dominant ...

Despite challenges such as regulatory uncertainties and financing constraints, the Mexico solar energy and battery storage market is poised for continued expansion as the country strives to achieve its ...
