The German government's commitment to phasing out coal and nuclear power further amplifies the importance of solar as a key renewable source, fostering a supportive environment for ...

OverviewGovernmental policiesHistoryStatisticsCompaniesSee alsoExternal linksGermany introduced its feed-in tariff in 2000 and it later became a model for solar industry policy support in other countries. As of 2012, the feed-in tariff costs about EUR14 billion (US\$18 billion) per year for wind and solar installations. The cost is spread across all rate-payers in a surcharge of 3.6 EURct (4.6 ¢) per kWh (approximately 15% of the total domestic cost of electricity). On t...

Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale launch of the technology with guaranteed feed-in tariffs in the ...

Germany is leaving the fossil-nuclear age behind, paving the way for photovoltaics (PV) to play a central role in a future shaped by sustainable power production.

Germany is the biggest and fastest-growing rooftop solar PV market in Europe. European market leader Germany occupies one quarter of the EU market and leads the list of EU countries ...

Discover the top solar power companies in Germany, including Enpal and Enerparc, as they advance renewable energy solutions.

Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy Sources Act, and ...

The dynamic growth of solar energy in Germany can be shown in numbers. In this section, you can find fact sheets that summarize the most important market indicators for the German photovoltaic, solar ...
