Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky ...

In this article, we will take a closer look at the components of the Solar System, from the blazing Sun to the mysterious comets that roam through space. What is the Solar System? The Solar ...

How many planets are in the solar system? How did it form in the Milky Way galaxy? Learn facts about the solar system's genesis, plus its planets, moons, and asteroids.

Learn about the solar system in astronomy. Get its definition, discover the planets in order, and get interesting facts.

The solar system is the Sun and all the objects that are bound to the Sun by gravity. The solar system has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.

With each planet, moon, asteroid, and comet, the solar system tells a story of birth, destruction, rebirth, and motion--stories written in craters, frozen oceans, swirling storms, and ...

Advances in photography, astronomy, telescopes, analytical techniques, telecommunications, and space flight have given us more detailed glimpses of our solar system.

Inside the Sun's core hydrogen is fused into helium for billions of years, releasing energy which is over even longer periods of time emitted through the Sun's outer layer, the photosphere. This creates the ...
