---

Borehole thermal energy storage (BTES) involves drilling several equally spaced vertical holes into the ground to store, charge, and discharge thermal energy from connected heat sources, ...

Scientists in Sweden have developed a specialised fluid, called a solar thermal fuel, that can store energy from the sun for well over a decade.

A recent breakthrough could allow us to store solar energy directly into a liquid for up to 18 years. How's it work? And could this be a viable path forward for solar energy storage? Let's see if ...

One method of storage involves thermal energy storage (TES) systems that utilize liquids for surplus energy retention. During peak sunlight hours, excess energy generated by solar systems ...

Researchers at Chalmers University of Technology in Sweden have demonstrated efficient solar energy storage in a chemical liquid. The stored energy can be transported and then released as heat ...

Solar thermal energy in this system is stored in the same fluid used to collect it. The fluid is stored in two tanks--one at high temperature and the other at low temperature.

A recent breakthrough now allows solar energy transportable as a liquid fuel and the produced heat to be converted into electricity. Working with a team of scientists from Shanghai Jiao Tong University in ...

In 2018, scientists in Sweden developed "solar thermal fuel," a specialized fluid that can reportedly store energy captured from the sun for up to 18 years.
