In this study, glass-carbon hybrid fibre reinforced polymer matrix composite is proposed to use in solar greenhouse dryer trays. The effects of hybridization on compressive instability failure ...

Scientists from Spain's research center TecNALIA have encapsulated solar panels with a composite material that they claim has enhanced chemical recyclability. The novel encapsulant ...

Reflective thermal insulation layers can offer an energy-efficient strategy for preventing temperature rises by reflecting sunlight on surfaces. Our previous study presented a novel solvent ...

Glass fiber serves as a backbone component in the construction of solar fiber tubes. This material is defined by its unique characteristics, such as its tensile strength and resistance to thermal ...

Despite the abundance of solar radiation, significant energy losses occur due to scattering, reflection, and thermal dissipation. Glass mitigates these losses by functioning as a ...

This research proposes and evaluates a lightweight PV module concept using glass fiber-reinforced polymers (GFRP) based on epoxy composites within the module stack.

Fiberglass solar panels with ETFE coating and HPBC cell technology represent significant advancements in photovoltaic technology, addressing limitations in conventional solar panel design ...

This paper presents the production and the performance of solar light-reflecting glass fiber-reinforced PP (GFPP) sheets having a hierarchically structured porous layer and an outermost skin layer covering ...
