Are cheap solar panels worth it?

Overall, cheap solar panels are worth it if you can't afford to pay for premium panels. Switching to solar will always save you money, but cheaper panels will typically save you less money than more expensive ones due to their lower efficiency and higher failure rates.

How much do solar panels cost?

Cost per watt (20 points): The cost of solar panels is one of the most important factors, as the price can range from \$2.50 per watt to well over \$3 per watt. Many homeowners consider the price of solar panels when doing their research, which is why we always include this data point in our methods.

Are affordable solar panels better than expensive?

This usually means that affordable panels are less efficient than expensive ones. The tradeoff for you is that less efficient panels don't convert sunlight to usable energy as readily as more efficient panels, which means your system will produce less electricity and save you less money in the long run.

Which solar panel should I buy?

Eagle Continental: This panel is my recommendation for the most affordable solar panel for homeowners on a budget. Its 19.8% efficiency rating is good, but not great, but its cost per watt, coming in at \$2.25, is hard to beat. Eagle G4: The Eagle G4 is a big step up from the Continental.
