It is a specialized type of glass that can help improve the energy efficiency of a building and make it more comfortable for its occupants. In this article, we will explore the benefits, types, and ...

Thermal insulation and solar control Whether it's to protect you from the cold or maintain a pleasant temperature, our solutions help you improve your comfort and reduce your energy consumption.

The innovative glazing ensures maximum thermal insulation, allows plenty of daylight into the building and enables passive use of solar energy. This increases the well-being inside and reduces heating ...

Crafted with heat-treated safety glass, our photovoltaic glass provides the same thermal and sound insulation as traditional options, flooding spaces with natural light. Perfect for facades, curtain walls, ...

Low emissivity (Low-E) glass is used to control light and solar heat gain in a room. This is achieved by applying a thin coating of metal, either silver or tin oxide, to the inner surface of the exterior glass pane.

In terms of thermal insulation performance, most of our solar control glass products - those with at least one silver coating, help reflect indoor heat back into the room and form a shield against the cold ...

Improves the energy efficiency of domestic or commercial buildings whilst enabling the extensive use of glass and the benefit of passive solar gain. Today's building codes, homeowners and communities ...

Solar control glass is designed to reduce overheating in homes and buildings due to solar gain. By reflecting infrared radiation and allowing natural light through, it maintains indoor comfort ...
