-----

Even more concerning, 85% of solar energy losses due to hail happen in just five states: Texas, Colorado, Nebraska, Kansas, and Oklahoma--regions at the heart of utility-scale solar buildout.

Rather, it is the news that hail stow protocols successfully prevented widespread physical damage at several utility-scale solar farms near Fighting Jays that were also exposed to very severe ...

Thousands of solar panels were shattered when a storm dropped golf ball-sized hail on a 3,300-acre, 350 MW utility-scale project in suburban Houston early last year. Production fell sharply ...

Texas" solar power growth has happened in spite of its vulnerability to hail damage. A cluster of states from North Dakota to Texas has the highest frequency and severity of hailstorms ...

The greatest contributor to insured losses on solar PV systems worldwide is severe hail. Severe hail events are forecasted to increase in frequency over time, emphasizing the increasing importance of ...

In mid-March, a hailstorm outside of Houston crippled an enormous solar plant, breaking panels and leaving local residents concerned about metals leaking into water supplies. Solar panels ...

Solar developers and manufacturers have taken steps to reduce the risk from hailstorms, which involves a combination of sophisticated weather forecasting and panels that can turn to avoid...

Thousands of panels on a solar farm southwest of Houston, Texas, were damaged by a powerful hailstorm on March 15. Aerial footage showed rows of cracked photovoltaic cells at the ...
